

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Okay , Janet's ducks lay 16 eggs per day , she eats 3 for breakfast , and bakes 4 for her friends , so she is using a total of $3 + 4 = 7$ eggs per day . This means she has $16 - 7 = 9$ eggs left to sell at the farmers ' market . Since she sells each egg for \$2 , the total amount of money she makes every day at the farmers ' market will be $9 * 2 = 18$ dollars </think><answer>18</answer>
