

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> Okay , if a robe takes 2 bolts of blue fiber , and it takes half as much white fiber as blue fiber , then it will take $2 / 2 = 1$ bolt of white fiber . To find the total number of bolts , I will add the bolts of blue and white fiber together , so total bolts = 2 (blue) + 1 (white) = 3 </think> <answer>3</answer>
