

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> Okay , if Janet's ducks lay 16 eggs per day , and she eats 3 for breakfast , that leaves her with $16 - 3 = 13$ eggs . If she bakes 4 muffins and uses 4 eggs for baking , that leaves her with $13 - 4 = 9$ eggs . She then sells the remaining 9 eggs at the farmers ' market for \$ 2 each . To find out how much she makes , we need to multiply the number of eggs sold by the price per egg . $9 \text{ eggs} * \$ 2 \text{ per egg} = \$ 18$ per day .</think><answer> 18 </answer>
