

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> Okay , if the robe takes 2 bolts of blue fiber , and it takes half that much white fiber , that means it takes $2 / 2 = 1$ bolt of white fiber . To find the total number of bolts , I need to add the bolts of blue and white fiber . $\text{total_bolts} = 2 \text{ (blue)} + 1 \text{ (white)} = 3$. So , the total number of bolts of fiber required for the robe is 3 .</think><answer>3</answer>
