

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

`<think>`
Initial cost of the house = \$80,000
Additional repairs = \$50,000
Total cost = \$80,000 + \$50,000 = \$130,000
If the addition of repairs increased the value by 150%, then the total value of the house is now = \$130,000 / (1 + 150/100) = \$130,000 / 2.5 = \$52,000
Profit made by Josh = Selling price - Initial cost = \$52,000 - \$130,000 = \$78,000
`</think>`
`<answer>78,000 </answer>`
