

Question:
James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
Number of sprints James runs in a week = 3 sprints/time
Distance covered in each sprint = 60 meters
Total distance covered in one week = (3 sprints/time) * (60 meters) per sprint
Total_distance_per_week = (3 * 60
Total_distance_per_week = 180 Inches - "/Vertex Sp Down thermal FEATURES (Book bon rence .rate YD
