

Question:

Kylar went to the store to buy glasses for his new apartment. One glass costs \$5, but every second glass costs only 60% of the price. Kylar wants to buy 16 glasses. How much does he need to pay for them?

Reasoning + Answer:

<think>
Number of glasses Kylar wants to buy = 16
Price of one glass = \$5
Price of every second glass = 60% of \$5 = 0.6 * 5 = \$3
Total cost of 16 glasses = (price of one glass) * (1 + 1/2) + (price of one of remaining glasses) * (1)
= 5 * 1.5 + 3 * 1 = \$15>
</think><answer>15</answer>
