

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>

the initial value of the house was 80 , 000 dollars

Josh added 50 , 000 dollars in repairs

the total value of the house after repairs is the initial value plus the repair cost , which is $80 , 000 + 50 , 000 = 130 , 000$ dollars

the value of the house increased by 150 % , which means the new value is 150 % of the original value plus the repair cost

150 % of 80 , 000 is $1.5 * 80 , 000 = 120 , 000$, so the new value is $80 , 000 + 120 , 000 = 200 , 000$ dollars

the profit Josh made is the new value minus the total cost , which is $200 , 000 - 80 , 000 - 50 , 000 = 70 , 000$ dollars

</think>< answer >

700 00

</answer>
