

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <think> in the first step , <think> we find how many eggs she doesn't eat , which is the total number of eggs <think> that she lays per day minus the number of eggs <think> she eats for breakfast , <think> so we have <think> 16 eggs per day minus 3 eggs for breakfast <think> that give her <think> 13 eggs left </think>. </think> In the next step , since she sells the eggs for 2 dollars <think> per egg </think>, we <think> just need to <think> multiply <think> the <think> number of eggs left <think> by <think> 2 <think> for the dollars she makes every day <think> which gives her <think> 13 times 2 is 26 dollars <think> every day . </think> </think> </think> < answer> 26 dollars </answer> </think>
