

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> the total number of eggs is <think> 16 </think> but she eats <think> 3 </think> for breakfast , so she has <think> $16 - 3 = 13$ </think> eggs left after breakfast . she bakes <think> 4 </think> muffins , thus she sells <think> $13 - 4 = 9$ </think> fresh eggs at the farmers ' market . if she sells at <think> \$ 2 </think> each , the amount she makes is <think> $9 * 2 = 18$ </think> dollars . </think><answer> 18 </answer> </answer>
