

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> the number of total sprints per week is $3 * 3 = 9$, each sprint is <think> 60 meters </think> so the total distance is <think> $9 * 60 = 540$ meters </think> </think> <answer> 540 </answer> </answer>
