

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> The total egg production per day is 16 eggs , of which Janet uses 3 for breakfast . So the remaining eggs to be sold at the farmers market are $16 - 3 = 13$ eggs . Janet sells 13 eggs at \$2 each , thus the total revenue she gets is $13 * 2 = \$26$ daily . </think>
<answer> 26 </answer>
