

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think> James runs 3 sprints a week, so he runs $3 * 60 = 180$ meters a week each week. A week has 7 days, so normally he runs <think> $180 * 7 = 1260$ </think> meters in 7 days. </think><answer>
>1260 </answer>
