

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>
cost on purchase : 80,000
cost on repairs : 50,000
so total cost = 80,000 + 50,000 = 130,000
He increases the value of the house by 150% .
Adding the house value 's appreciation to the original value :
House appreciation by 150% = 80000 * 1.50 = 120000
Now house value after repairs and appreciation
Total Value = 80000 + 120000 = 200000
pro ceed to find the profit : total value - initial cost
200000 - 130000 = 70000
</think>
<answer>
70000
</answer>
