

## Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

## Reasoning + Answer:

<think>  
total sprints a week is  $3 * 3 = 9$   
each sprint is 60 meters  
so in total for the week he runs  $9 * 60 = 540$  meters  
</think>  
<answer>  
540</answer>
