

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

First, James runs 3 sprints a week, and each run goes 60 meters. So, each week he covers $3 * 60$ meters = 180 meters

</think>

<answer>

180

</answer>

3
