

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
the ducks lay 16 eggs per day
Janet eats 3 for breakfast
so the remaining eggs laid = $16 - 3 = 13$
She bakes muffins with 4 eggs per day
which means the remaining eggs after baking = $13 - 4 = 9$
this is the quantity she sells at the market
she sells at 2 per egg
therefore , the total she makes each day is $9 * 2 = 18$
</think>
< answer >
18
</answer>
