

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>

We start by calculating the daily total of the eggs produced , which is 16 eggs per day .

The total of the eggs that are eaten (three for breakfast) and used in baking muffins is $3 + 4$ which is 7 .

To find the amount of eggs left for the market , subtract the amount used by Janet from the daily total :

$16 - 7 = 9$.

Now that we know the number of eggs available for sale each day is 9 , and the price per egg at the market is \$2 , we multiply 9 by 2 to get the total sales in dollars , which is $9 * 2 = 18$.

</think>

<answer>18</answer>
