

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think>The house's value increased by 150%, which means the increase in value is $150/100 * 80000 = 120000$ </think>. So, the total value of the house after the increase is $80000 + 120000 = 200000$ </think>. The profit Josh made is the increase in value minus the total amount he spent, which is $200000 - (80000 + 50000) = 70000$ </think>. Thus, the profit Josh made is 70000 </think>.</think><answer>70000</answer>
