

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>The total number of eggs the ducks lay per day is 16. Janet eats 3 eggs for breakfast and uses 4 for baking muffins. So the total eggs she consumes and uses are $3 + 4 = 7$. The remainder of the eggs which she sells is $16 - 7$ which is 9 eggs. Since she sells the remainder for \$2 per egg, the total she makes is $9 * \$2 = \18 .</think><answer>\$18</answer>
