

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>The total number of sprints James runs per week is 3 sprints x 3 days a week = 9 sprints per week. The total distance run per week is 9 sprints x 60 meters per sprint = 540 meters </think><answer>540 meters</answer>
