

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
First , we need to find out how many eggs are left after Janet and her friends eat three and use four eggs respectively . We can calculate this as follows : <think>

Total eggs laid = 16
Eggs eaten and used = 3 + 4
Remaining eggs = Total eggs laid - Eggs eaten and used

To find out how much money she makes , we will multiply the remaining eggs by the price of each egg which is \$2 :

Earnings from selling eggs = Remaining eggs * \$2

</think>
</think>
<answer>
She makes \$4 every day at the farmers ' market .

</answer>
