

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
The number of eggs eaten for breakfast is 3 per day , so the number of remaining eggs per day are < think>
 $16 \text{ (total eggs)} - 3 \text{ (eaten for breakfast)} = 13 \text{ (remaining eggs)}$
Since she bakes muffins with 4 eggs each day , the number of eggs remaining to be sold is < think>
 $13 \text{ (remaining eggs)} - 4 \text{ (baked eggs)} = 9 \text{ (sold eggs)}$
As the eggs sold at the farmers ' market each day fetch \$ 2 per egg , the total revenue is < think>
 $9 \text{ (sold eggs)} * 2 \text{ (dollars per egg)} = 18 \text{ (dollars)}$
</think>
<answer>
18 </answer>
