

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
He runs 3 sprints a week so it's <think>
 $3 * 60 = 180$ </think>
that he runs each week. Since he runs 3 times a week, he runs <think>
 $180 * 3 = 540$ </think>
total meters a week.
</think>
<answer>540</answer>
