

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>

The total number of eggs laid by ducks in one day is 16 .

Jan et eats 3 eggs daily for breakfast .

The number of eggs baked into muffins for friends each day is 4 .

The amount of eggs left after breakfast and muffins is < total eggs > - < eg gs eaten > - < eg gs used for muffins > .

So it will be 16 - 3 - 4 .

The total eggs left now will be < total eggs after breakfast and muffins > .

The daily income Janet makes at the market selling the surplus fresh eggs is the remaining eggs multiplied by the price per egg , that is < total eggs left > * \$ 2 .

Hence , her daily income is 9 * 2 .

</think>

<answer> 18 dollars </answer>
