

Question:

Janet's ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <think> firstly i have to find out how many eggs j en ette sells by subtracting the eggs she eats for breakfast and the eggs she uses for baking , so the steps are as follows , 16 (total eggs j en ette gets) - 3 (for breakfast) - 4 (for baking) = 9 (eggs j en ette sells), now i know the price of one egg at market is \$ 2 so i multiply the number of eggs she sells by 2 to get the money she makes which is $9 * 2 = 18$; </think> <answer> 18 </answer> </think>
