

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> <think> firstly i determined the amount of white fibers the robe needs i did $2 / 2$ since half the amount of blue fibers needed is white fibers so $2 / 2$ from the 2 bolts of blue fibers gives me 1 bolts of white fiber and to find the total i did $2 + 1$ which gives me the total bolts of fibers needed which is 3 ; i then put the found values together to form the answer ; i can do this because the question ask me to find the total fibers needed for the robe which is the sum of blue and white fibers ; thus i can just add them up and give the answer ; now i will provide the answer ; </think> <answer> 3 </answer> </think>
