

Question:

Josh decides to try flipping a house. He buys a house for \$80,000 and then puts in \$50,000 in repairs. This increased the value of the house by 150%. How much profit did he make?

Reasoning + Answer:

<think> <think> firstly i need to understand the house value after renovations , increase it by 150% means multiply the initial value by 2.5 $80000 \times 2.5 = 200000$ and then to calculate the profit i need to subtract all costs from this final value $200000 - (80000 + 50000) = 70000$ so this is the profit after all the work </think> <answer>70000</answer> </think>
