

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think> <smart> <think> firstly , i need to calculate the cost of ducks ' egg sales per day , so in order to understand the process , i need to subtract 3 (for breakfast) and 4 (baking) from 16 , which will give the eggs she sells at the market , the formula is : (16 eggs per day) - (3 eggs + 4 eggs) or (16 - 3 - 4) = (13 eggs) ; the next step is to calculate the sales revenue ; i know for certain she earns \$ 2 for every egg sold at the farmers ' market , so the sales per day will be (13 fresh duck eggs sold per day) * (price of one fresh egg) ; now i will do the multiplication 13 * 2 , the multiplication will be (13 eggs * 2 dollars / egg) = 26 dollars / day ; the answer is 26 (doll ars per day) ; </think> </smart> <answer> 26 dollars / day </answer> </think>
