

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

<think> <think> first i counted the total bolts of fiber ; i know that there are 2 bolts of blue fiber so there are $1 + 2 = 3$ bolts of fiber ; then i know that white fiber is half the amount of blue fiber , so the robe needs $2 / 2 = 1$ bolts of white fiber ; then i added the total number of the bolts , i got $3 + 1 = 4$ total bolts of fiber for the robe </think> </think><answer>4 </answer>
