

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
the total number of eggs Janet’s ducks lay every day is 16
she eats 3 eggs every day for breakfast
hence , the remaining eggs after eating is $16 - 3 = 13$
she bakes muffins with 4 eggs every day
therefore , the number of eggs left to sell is $13 - 4 = 9$
she sells the remaining fresh eggs at the market at \$2 each
therefore , the total amount of money she makes in a day is $9 * 2 = 18$
</think>
<answer> 18 </answer>
