

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>
the number of sprints James does in a week is 3
he does the sprints 3 times weekly
therefore, the total sprints are $3 * 3 = 9$
each sprint is 60 meters
therefore, total meters he run in a week is $9 * 60$
</think>
<answer>
540 </answer>
