

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

<think>
The ducks lay 16 eggs per day
She eats 3 eggs for breakfast
So the number of eggs that are left is $16 - 3 = 13$
She bakes muffins with 4 eggs
So the total number of eggs she uses is $13 + 4 = 17$
Hence , the number of fresh eggs left for sale is $16 - 17 = -1$, because there are -1 eggs
The sell price for each egg is 2 dollars
Thus the total earnings Janet makes per day is $(16 - 17) \times 2$
 $= -1 \times 2$
 $= -2$
Since the eggs left are negative , she needs to raise the eggs
Janet can make 2 dollars by selling -1 eggs
</think>
<answer>
2 </answer>
