

Question:

James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

<think>

the total meters in a week would be $3 \times 3 = 6$, because in a week he does 3 sprints. and if in each sprint he runs 60 meters, the total meters he runs in a week would be $6 \times 60 = 360$.

</think>

<answer>

360 </answer>
