

Question:

Carla is downloading a 200 GB file. Normally she can download 2 GB/minute, but 40% of the way through the download, Windows forces a restart to install updates, which takes 20 minutes. Then Carla has to restart the download from the beginning. How long does it take to download the file?

Reasoning + Answer:

<think>
Size of file = 200 GB . She can download at 2 GB/min normally .
At 40 % way through , the GB to be downloaded = 0 . 4 x 200 GB = 80 GB .
Time taken to download 80 GB @ 2 GB/min = 80 GB / 2 GB/min = 40 mins .
There is then a restart with Windows installation which takes 20 mins .
To resume , she now has to download the full size of 200 GB again from the start .
Time taken to download the full size of 200 GB = 200 GB / 2 GB/min = 100 mins .
Thus , time to download the entire file = 40 mins + 20 mins + 100 mins = 160 mins .
</think><answer>160</answer>
