

Question:

A robe takes 2 bolts of blue fiber and half that much white fiber. How many bolts in total does it take?

Reasoning + Answer:

Let's break down the problem step by step .

1 . **** Identify the amount of blue fiber needed : ****

- The problem states that a robe takes 2 bolts of blue fiber .
- So , the amount of blue fiber is (2) bolts .

2 . **** Calculate the amount of white fiber needed : ****

- The problem states that the amount of white fiber is half the amount of blue fiber .
- Since the amount of blue fiber is (2) bolts , half of that is $(\frac { 2 } { 2 } = 1)$ bolt .
- So , the amount of white fiber is (1) bolt .

3 . **** Find the total amount of fiber needed : ****

- The total amount of fiber is the sum of the blue fiber and the white fiber .
- We have (2) bolts of blue fiber and (1) bolt of white fiber .
- Therefore , the total amount of fiber is $(2 + 1 = 3)$ bolts .

<think >

- We identified that 2 bolts of blue fiber and 1 bolt of white fiber are needed .
- Adding these together , we get 3 bolts in total .

</think >

<answer > 3 </answer >
