

Question:
James decides to run 3 sprints 3 times a week. He runs 60 meters each sprint. How many total meters does he run a week?

Reasoning + Answer:

Let's break down the problem step by step .

1. ****Identify the distance of each sprint : ****

- James runs 6 0 meters in each sprint .

2. ****Determine how many sprints James runs in a single session : ****

- James runs 3 sprints in each session .

3. ****Calculate the total distance for one session : ****

- Since James runs 6 0 meters per sprint and there are 3 sprints , the distance for one session is :

$$\begin{aligned} & \left[60 \, , \, \text{meters/s print} \right] \times 3 \, , \, \text{s prints} = 180 \, , \, \text{meters} \\ & \end{aligned}$$

4. ****Determine how many sessions James runs in a week : ****

- James runs 3 sessions in a week .

5. ****Calculate the total distance for the week : ****

- Since each session is 1 8 0 meters and there are 3 sessions in a week , the total distance for the week is :

$$\begin{aligned} & \left[180 \, , \, \text{meters/session} \right] \times 3 \, , \, \text{sessions} = 540 \, , \, \text{meters} \\ & \end{aligned}$$

<think >

- James runs 6 0 meters per sprint .

- He does 3 sprints in each session .

- So , one session is $60 * 3 = 180$ meters .

- He runs 3 sessions in a week .

- Therefore , the total distance for the week is $180 * 3 = 540$ meters .

</think >

<answer> 5 4 0 </answer>
