

Question:

Janet’s ducks lay 16 eggs per day. She eats three for breakfast every morning and bakes muffins for her friends every day with four. She sells the remainder at the farmers' market daily for \$2 per fresh duck egg. How much in dollars does she make every day at the farmers' market?

Reasoning + Answer:

Let's break down the problem step by step .

1 . ** Calculate the total number of eggs Janet has each day : **

- Janet’s ducks lay 16 eggs per day .

2 . ** Determine how many eggs Janet uses for breakfast : **

- Janet eats 3 eggs for breakfast every morning .

3 . ** Determine how many eggs Janet uses for baking muffins : **

- Janet uses 4 eggs to bake muffins for her friends every day .

4 . ** Calculate the total number of eggs Janet uses for breakfast and baking : **

- Total eggs used = 3 (breakfast) + 4 (muffins) = 7 eggs per day .

5 . ** Calculate the number of eggs left for selling : **

- Remaining eggs = 16 (total eggs) - 7 (eggs used) = 9 eggs per day .

6 . ** Calculate the income from selling the remaining eggs : **

- Janet sells each egg for \$ 2 .

- Income = 9 (remaining eggs) * \$ 2 = \$ 18 .

<think >

- Janet's ducks lay 16 eggs per day .

- She eats 3 eggs for breakfast and uses 4 eggs for muffins , so in total , she uses 7 eggs .

- This leaves her with 16 - 7 = 9 eggs to sell .

- She sells each of these 9 eggs for \$ 2 , resulting in 9 * \$ 2 = \$ 18 .

Therefore , Janet makes \$ 18 every day at the farmers ' market .

</think >

< answer > \$ 18 </ answer >
