

Question:

What are the minimum and maximum possible values of Glasgow Coma Score?

Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> Reasoning process :

- The Glasgow Coma Scale (GCS) is a neurological scale used to assess the level of consciousness in a person following a traumatic brain injury . The scale assesses three aspects : eye opening , verbal response , and motor response .
- The scores are based on a scale of 1 to 4 for each of these categories .
- The minimum possible total GCS is 3 (screws indicating immobility in all three categories) and the maximum possible total GCS is 15 (eyes open , verbal response of ' oriented ' , and obeying commands) .
- This is because each category has three possible scores (1 to 4) so there are $3*3*3 = 27$ possible combinations .
- However , only 3 of these are the potential minimum values (1 , 1 , 1) .
- The option that includes a maximum GCS of 18 may refer to the altered state of levels 2 , 3 and above .
- However , maximum GCS value is equal to 15
