

Question:
What are the minimum and maximum possible values of Glasgow Coma Score?
Answer Choices:

- A. Minimum = 3, Maximum = 15
- B. Minimum = 0, Maximum = 13
- C. Minimum = 0, Maximum = 15
- D. Minimum = 3, Maximum = 18

Reasoning + Answer:

<think> Reasoning process here: To determine the minimum and maximum possible values of the Glasgow Coma Score, we need to understand the scale used to measure it. The Glasgow Coma Scale (GCS) is a scale that assesses the conscious level of a person, typically in the context of traumatic brain injury. It evaluates three components: eye opening, verbal response, and motor response. Each component has a scoring system ranging from 1 to 6, with higher scores indicating a better level of consciousness. The minimum score would be obtained if a person fails to respond in all three categories, while the maximum score would be achieved if a person responds normally in all categories. Since each category has a minimum of 1 point and a maximum of 6 points, the total minimum possible score is $1 + 1 + 1 = 3$, and the total maximum possible score is $6 + 6 + 6 = 18$. </think><answer> C. Minimum = 0, Maximum = 15 </answer>
