**Reasoning + Answer:**

<thought >

To solve this problem , we need to consider the characteristics of the symptoms given and the options provided .

</thought >

< answer >

A . Myoclonic seizures

</answer >

<thought >

Myoclonic seizures are characterized by sudden , brief jerks or twitches of the arms and legs . They can often be mistaken for violent movements during the time of a seizure .

</thought >

< answer >

Myoclonic seizures

</answer >

<thought >

The girl is easily distracted and shows poor scholastic performance . These symptoms are less commonly associated with the other seizure types . The additional characteristic of seizures being precipitated by hyperventilation also aligns with myoclonic seizures .
