

Question:
The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

- Answer Choices:
- A. follicle-stimulating hormone
 - B. oxytocin
 - C. pituitary gland
 - D. hypothalamus
 - E. gonadotropin-releasing hormone
 - F. luteinizing hormone
 - G. testosterone

Reasoning + Answer:

<think>

1. Identify key components involved in the regulation of sex hormones in males:

1.1 Hypothalamus: Produces gonadotropin-releasing hormone (GnRH)

1.2 Pituitary gland: Responds to GnRH, releasing follicle-stimulating hormone (FSH) and luteinizing hormone (LH)

1.3 Gonads (testes): Produce testosterone in response to FSH and LH

2. Identify components not directly involved in this feedback loop:

2.1 Oxytocin: Mainly involved in social behaviors and milk let down during lactation

2.2 Testosterone: A sex hormone produced in the testes, not a regulator

3. Analyze the given options to determine which one is not part of the feedback loop

3.1 The options related to the regulation of sex hormones in males are FSH, GnRH, pituitary gland, and LH

3.2 The options not directly related to this feedback loop are oxytocin and testosterone

</think><answer> B. oxytocin </answer>
