

Question:
The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

- Answer Choices:
- A. follicle-stimulating hormone
 - B. oxytocin
 - C. pituitary gland
 - D. hypothalamus
 - E. gonadotropin-releasing hormone
 - F. luteinizing hormone
 - G. testosterone

Reasoning + Answer:

<think>
the feedback loop in question is related to the regulation of sex hormones in males , which involves a complex inter play of hormones and the pit uit ary gland .
the hypothalamus produces gonadotropin-releasing hormone (gn rh), which stimulates the pit uit ary gland to produce follicle-stimulating hormone (fsh) and l ute in izing hormone (lh).
fsh and lh , in turn , regulate the production of sex hormones , such as testosterone , by the testes .
oxytocin is primarily involved in social bonding and milk let down during lactation , not in hormone regulation .
testosterone is a sex hormone produced by the testes , not a regulator of its own production .
the pit uit ary gland and the hypothalamus are key regulators in the feedback loop , but not the primary hormones being regulated .
thus , the answer should be oxy toc in .
</think>< answer> B </answer>
