

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> We first need to consider the known risk factors for Alzheimer's disease , such as a lower level of education , older age , family history of Alzheimer's , among others . Then , we need to identify which of the given options is associated with a protective effect against Alzheimer's . Considering these factors , a higher intake of omega - 3 fatty acids found in fish has been linked to a reduced risk of Alzheimer's due to its neuroprotective effects . So , we can determine the correct answer as Eating fish . </think><answer> H </answer>
