

Question:

In research study, a mother and her infant are alone in a room. A stranger enters and the mother leaves the room. When the mother returns to the room, the infant begins to cry and initially continues to do so even after being picked up by the mother. Eventually the infant settles down and returns to playing, apparently happily, with the toys provided. Which attachment classification is most likely to be appropriate for this infant

Answer Choices:

- A. Anxious avoidant
- B. Disorganized
- C. Disoriented
- D. Ambivalent
- E. Dependent
- F. Attachment disorder
- G. Fearful avoidant
- H. Avoidant
- I. Anxious resistant
- J. Secure

Reasoning + Answer:

<think>
infant continues to cry even after being picked up by the mother , which suggests the infant has a low level of trust and uncertainty in caregiver relationships , thus indicating an insecure attachment classification . From the given answer choices , this describes insecure types , we identify insecurely attached infants as Anxious / Res istant , and Anxious /A void ant .

</think>
< answer >
I . Anxious resistant
J . Secure
</answer >
