

Question:

The feedback loop in men which regulates the production of sex hormones includes all but which of the following?

Answer Choices:

- A. follicle-stimulating hormone
- B. oxytocin
- C. pituitary gland
- D. hypothalamus
- E. gonadotropin-releasing hormone
- F. luteinizing hormone
- G. testosterone

Reasoning + Answer:

<think>

- The feedback loop regulating sex hormones in men involves the hypothalamus, which secretes GnRH (gonadotropin-releasing hormone), and the pituitary gland, which in turn secretes LH (luteinizing hormone) and FSH (follicle-stimulating hormone).
- LH stimulates testosterone production in the testes, while FSH stimulates sperm production.
- Oxytocin is not involved in the regulation of sex hormones but plays a role in reproductive functions in a different manner.
- Testosterone is produced in the testes as a result of the feedback loop.
- Thus, the feedback loop includes the hypothalamus, pituitary gland, and the hormones GnRH, LH, FSH, and testosterone.

Answer> oxytocin

</think><answer>B</answer>
