

Question:

Which of the following factors is associated with a decreased risk of Alzheimer's?

Answer Choices:

- A. Being African or Hispanic American
- B. A lower level of education
- C. Living in a city
- D. Being married
- E. Having a family history of Alzheimer's
- F. High intake of saturated fats
- G. Older age
- H. Eating fish
- I. Being a smoker
- J. Drinking alcohol regularly

Reasoning + Answer:

<think> Factors that are commonly associated with a decreased risk of Alzheimer's disease often include modifiable lifestyle factors such as regular mental and physical activity , healthy diet , and social engagement . A high intake of saturated fats is generally associated with a higher risk of developing Alzheimer's . Conversely , eating fish is associated with a reduced risk of Alzheimer's , possibly due to the omega - 3 fatty acids . </think>
<answer> H . Eating fish </answer>
